

Hosted & Managed Service

ERS Wireless manages everything for you- offering system resiliency and availability.

ERS Wireless can provide customers the opportunity to update their wireless voice, video security, and data technology without the need for large capital outlays. We offer Hosted and Managed Service Contracts that provide the service of wireless voice, video security, and data, where ERS Wireless owns and maintains the equipment necessary to provide you a reliable system for your operations.

Hosted and Managed Service contracts are designed specifically to your communication system requirements - to meet your current coverage needs while also ensuring we can expand the system as your needs change.

ERS Wireless has been designing, installing, and maintaining communication systems for over 75 years with experienced staff and Motorola's best in class products.

Hosted and Managed Service contracts can provide you the technology you need while allowing you to pay on a monthly or annual basis, which generally means it can be an operating expense versus a capital purchase. This program is not a lease agreement or financing program, it is a service that ERS Wireless offers to our customers, and it stays with ERS Wireless for the life of the agreement. At the end of the term, you can continue to utilize the equipment as-is and continue to pay a monthly fee for services, you can upgrade your equipment under a new agreement, or you can return the equipment. This program provides flexibility and the peace-of-mind that your system will be maintained to manufacturer standards to ensure optimal performance.
