

# INTEGRATED SAFETY & SECURITY SOLUTIONS

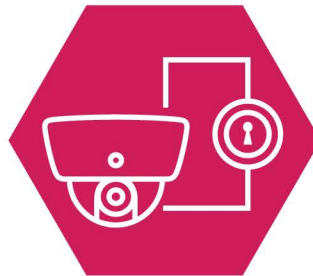

As a Motorola Solutions Safe Ecosystem Badged Partner, fully trained and certified to engineer, deploy, and maintain integrated Motorola voice, video, and data (AI) security solutions, ERS Wireless works directly with customers in Education, Healthcare, Manufacturing, and Government to design, implement, and support integrated systems.

## VOICE

Broadband Push-to-Talk  
In-Building BDA & DAS  
Motorola Radio systems

## VIDEO

Access Control  
Vape Smart Sensors  
Video Security Systems  
Weapons Detection

## DATA

Dispatch Consoles  
Mass Notification  
Workflow Automation

### WHY ERS WIRELESS

We offer the full line of Motorola Solutions voice, data, and video technology and the services to support those products. In addition to Motorola, we also have partnerships with Avigilon, Allegion, and Evolv Technologies.

ERS Wireless has Indiana offices in Bloomington, Columbus, Elkhart, Evansville, Fort Wayne, Indianapolis, Ligonier, and Kentucky offices in Lexington and Louisville.

## VOICE: RADIO & BROADBAND COMMUNICATIONS

### Motorola MOTOTRBO™

Motorola Two-Way Radio Systems are available in Single-site, District-wide, and State-wide radio systems. Broadband Push-to-Talk solutions make it easy for administrators to talk to radio users via their smartphone.

### BDA & DAS In-Building Coverage Solutions

Bi-Directional Amplifier and Distributed Antenna Solutions help eliminate “dead spots” for cellular and radio users.

## VIDEO: PHYSICAL SECURITY

### Access Control

Managing access into your school buildings is crucial to help ensure only authorized individuals can enter your buildings.

### Avigilon Video Security

Enhance visibility across campus with video security systems that offer analytic features such as appearance search, identity search, unusual motion detection, and focus of attention.

- **Avigilon Alta Cloud Cameras and Video Management Software** are easily integrated with access control, analytics and other security technology such as dispatch and radio systems.
- **Avigilon Unity On-prem and Video Management Software** centralizes video security, access control, and flexible cloud management into one platform.

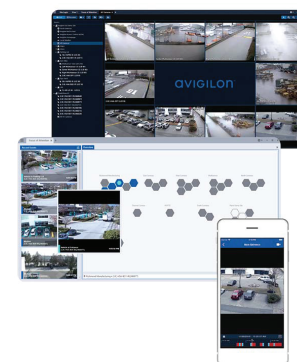

### Evolv Technologies Concealed Weapons Detection

Using advanced sensors, technology, and specialized cameras, the system can screen over 3,600 people per hour—all without requiring them to stop, empty bags, or remove items from their pockets.

### Smart Sensors

HALO Smart Sensors are a reliable sensor that can be installed where cameras can't. They can be used to detect vape, chemical detection, cold storage monitoring, space occupancy and energy optimization.

## DATA: DISPATCH & INCIDENT MANAGEMENT

### Dispatch Consoles

Dispatch consoles are the central point of operation, allowing dispatchers to communicate with personnel, and make quick decisions using voice and data.

### Motorola Orchestrate

This cloud-based workflow automation platform allows schools to integrate various security and communications technologies to improve efficiency and response times.

### Mass Notification

Rave Alert is a Cloud-based Mass Notification Platform that allows schools to send alerts to a large group of people simultaneously, across multiple communication channels such as text/SMS, email, voice calls, social media, and digital signage.
